The global Pipeline Automatic Welding Machine market size is predicted to grow from US$ 1735 million in 2025 to US$ 2612 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The pipeline automatic welding machine is an automated equipment specially used for long-distance pipeline welding operations. It is mainly used to achieve efficient, continuous and high-quality welding of pipeline ports. It automatically completes the arc starting, welding, wire feeding and shielding gas control of the weld through the coordinated work of the track system, welding host, controller, wire feeding system and welding power supply, which greatly improves the construction efficiency and welding consistency, and reduces the dependence on the technical level of manual welders. It is especially suitable for complex outdoor environments and large-diameter pipeline projects. In recent years, with the development of intelligent manufacturing technology, modern automatic welding machines have also integrated functions such as weld tracking, intelligent adjustment of welding parameters, and real-time monitoring and recording of welding quality, which have promoted pipeline welding into a new era of digitalization and intelligence.

United States market for Pipeline Automatic Welding Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
