The pipeline full-position automatic welding machine is an advanced intelligent welding equipment that can automatically complete the girth welding operation from 1G to 6G in any direction without rotating the pipeline body, covering the entire process of pipeline root welding, filling, and covering. The equipment integrates a track motion system, an intelligent control system, and a high-performance welding power supply, which can achieve high-quality and high-consistency weld output. It is particularly suitable for large-scale oil and gas long-distance pipelines, power pipelines, and other projects that require efficient and high-strength welding. Through automation technology, the equipment significantly improves the efficiency and safety of welding operations, reduces dependence on highly skilled welders, and promotes the transformation of pipeline construction to mechanization and intelligence.
