## Abstracts

The global PIR Sandwich Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Polyisocyanurate foam PIR is an ideal organic thermal insulation material with low thermal conductivity, strong weather resistance, and can be prefabricated or cast on site. It is widely used in cryogenic insulation projects of oil refineries, chemical plants, ethylene, fertilizer and other pipelines, thermal insulation projects of construction industry, and thermal insulation projects of central heating and water supply pipelines, etc.

For the current construction industry, new building materials have obvious potential, and the development prospects are also very optimistic, the same is true for sandwich color steel plates. The more classifications, it means that its use will become more and more extensive. In fact, the characteristics of sandwich color steel plate are also very powerful. First, its light weight and weight per square meter are less than 24kg, which can fully reduce the structural cost. The second is that the sandwich color steel plate is quick to install, light in weight, plugged in, installed and can be cut at will, which determines its easy installation, which can improve efficiency and save construction period. Another point is also very important, its fire resistance, fire resistance, ability is also very strong, the surface material and insulation material of the composite cored board are non-combustible or flame-retardant materials, which can meet the requirements of fire protection regulations, after special coating The treated color steel plate is guaranteed to be new for 10-15 years, and the life of the plate is more than 35 years. After that, the anti-corrosion coating is sprayed every ten years. The combination of the potential of all sandwich color steel plates and its characteristics will definitely have a personality. Very broad market.
