## Abstracts

The global Piracetam Injection market size is predicted to grow from US\$ 6281 million in 2025 to US\$ 59720 million in 2032; it is expected to grow at a CAGR of 38.7% from 2026 to 2032.

It is suitable for memory loss and mild to moderate brain dysfunction caused by various reasons such as acute and chronic cerebrovascular diseases, brain trauma, and various toxic encephalopathy. It is also used for children with mental retardation.

Brain diseases have always been one of the most difficult areas for human beings to conquer. There are constant disputes over whether neuroprotective agents are life-saving drugs or panacea. The neuroprotective drug market is greatly influenced by evidence-based drug use and related policies. New drugs such as butylphthalide and edaravone dexaborneol are developing rapidly, and after the decline of many old drugs such as edaravone, oxiracetam, and gangliosides, they have taken over and become Dinghaishenzhen among neuroprotective drugs. In addition, piracetam, which is a gamma-aminobutyric acid analogue like oxiracetam, has also been recommended by multiple guidelines, bucking the trend and achieving market growth.
