The global Piston Flow Meter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A piston flow meter is a positive displacement flow meter used to measure the volumetric flow of liquids and gases. It consists of a chamber containing a piston, an inlet and outlet valve, and a pressure sensor. The piston is driven by an external power source (such as an electric motor, magnetic field, or cylinder) and moves back and forth in the chamber. As the piston moves, it displaces a fixed volume of liquid or gas, and the flow rate is calculated based on the speed of the piston and the volume displaced. The inlet and outlet valves open and close to control the flow rate, and the pressure sensor measures the pressure in the chamber.
