A piston melt filter is a filtration device used in the plastics processing industry to remove impurities and contaminants from molten plastic materials. It typically consists of a cylindrical housing with a piston-driven filtration screen or mesh. The molten plastic is forced through the screen by the piston, allowing the filter to capture particles, gels, and other undesired materials. This process helps ensure the quality and purity of the molten plastic before it is further processed or molded into end products. Piston melt filters are commonly employed in extrusion processes, such as those used in the production of films, sheets, and other plastic products.
