A piston sampler is a type of sampling device used to collect samples of soil, sediment, or other materials from below the surface. It consists of a hollow tube with a piston at one end and a handle at the other. The tube is inserted into the ground or sediment, and the piston is pushed down to collect a sample. The piston creates a vacuum seal, preventing the sample from escaping as it is removed from the ground. Piston samplers are commonly used in environmental and geological studies to collect undisturbed samples for analysis.
