A Piston Type Briquetting Machine is a piece of equipment used to compress biomass materials into dense and consistent briquettes, which can be used as fuel. The machine typically consists of a hydraulic system with a piston press that compresses the biomass material into a cylindrical or rectangular shape. These machines are widely used in industries that deal with biomass materials, such as agriculture, forestry, and waste management, to convert waste materials into valuable fuel sources. The briquettes produced by piston type briquetting machines have a higher density compared to loose biomass materials, making them easier to handle, transport, and store. They also have lower moisture content, which improves their combustion efficiency.

The global Piston Type Briquetting Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
