A piston car air conditioning compressor is a common compressor type that uses a reciprocating piston to compress refrigerant and send it into the car's air conditioning system. Piston compressors usually consist of multiple pistons, cylinders, valves and crankshafts. When the piston moves downward, the gas in the cylinder is sucked in and enters the compression chamber through the valve. Then when the piston moves upward, the gas is compressed and sent into the car's air conditioning system through the exhaust valve.
