A pit puzzle parking system is a type of mechanical parking system designed to optimize parking capacity in urban areas with limited space. In this system, vehicles are parked on multiple levels below ground, within a pit excavated beneath the surface of the parking facility. The parking spaces are arranged in a puzzle-like configuration, with each parking platform moving vertically and horizontally to allow vehicles to be parked and retrieved efficiently. As vehicles are parked below ground level, the system minimizes the visual impact on the surrounding environment and maximizes the use of available land. Pit puzzle parking systems are typically fully automated, with users able to access their vehicles using a touchscreen interface or mobile app. These systems offer several advantages, including efficient use of space, rapid parking and retrieval times, and enhanced security for parked vehicles. They are commonly used in densely populated urban areas where land is limited and parking demand is high, providing a convenient and space-efficient solution to parking challenges.

The global Pit Puzzle Parking System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
