The global Pitot Tube Apparatus market size is predicted to grow from US\$ 4288 million in 2025 to US\$ 5060 million in 2031; it is expected to grow at a CAGR of 2.8% from 2025 to 2031.

A Pitot Tube Apparatus, also known as a Pitot-static tube apparatus, is a specialized measurement tool used in fluid dynamics and aerodynamics to determine the velocity of a fluid, such as air or a liquid, at a specific point within a flow stream. It is named after Henri Pitot, the French engineer who invented the device in the 18th century. The apparatus consists of a Pitot tube and a pressure-measuring instrument, typically a manometer or pressure gauge.

Modern Pitot Tube Apparatus increasingly incorporates digital pressure sensors and data acquisition systems. This allows for more precise and real-time measurement of pressure differences, reducing the potential for human error in reading analog gauges.
