The global Planar Magnetic Drive Conveyor Systems market size is predicted to grow from US\$ 2300 million in 2025 to US\$ 3283 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

The planar magnetic drive conveyor system is an innovative automated transport solution that uses the principle of magnetic field drive to achieve contactless and flexible transportation of materials on a two-dimensional plane. The system generates a controllable electromagnetic field through an embedded coil array, which interacts with the permanent magnets installed on the transport carrier to achieve the suspension and movement of the carrier. This design eliminates the friction and wear in traditional mechanical transmission and provides a faster, smoother and almost silent operation experience. Each transport unit can be independently programmed to dynamically adjust the speed, direction and path according to production needs, greatly improving the response speed and efficiency of the production line.
