Abstracts

The global Planar Perimeter market size is predicted to grow from US$ 132 million in 2025 to US$ 184 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

In 2024, global planometry production reached 17,181 units, with an average selling price of $7,520 per unit.

Planometry is an ophthalmic and neurological instrument used to assess the central visual field (within 30° of the focal point). Its core principle is based on tangent projection geometry. It assesses visual field integrity using concentric circles (5° apart) and meridian markers on a black, non-reflective screen (typically 1m?1m or 2m?2m), combined with a moving sight mark (a white or colored cursor with a diameter of 1-5mm). During the examination, the subject maintains a standard distance of 1 or 2 meters and fixates monocularly on a central fixation point. The sight mark is moved at a constant speed along the meridian from the periphery to the center or vice versa. Through cover maneuvers and observation of the fixation point, the boundaries of the scotoma are marked in real time and transcribed onto a visual field chart. Finally, isotropic lines are plotted to locate visual field defects. This system is particularly adept at detecting pathological changes such as central and paracentral scotomas.

The upstream of the planar perimeter industry consists of optical components, electronic components, and precision mechanical parts (optical lenses, sensors, microprocessors, etc.); the midstream is the manufacturing of planar perimeters (by companies such as ZEISS and Haag-Streit); and the downstream is ophthalmic diagnostics in medical institutions (hospitals, ophthalmology clinics, etc.). These devices are primarily used for early diagnosis and treatment monitoring of eye diseases such as glaucoma. The industry trend is toward improved precision and intelligence in these devices, as well as their deep integration with the ophthalmic diagnosis and treatment

system (e.g., standardized operations to improve diagnostic accuracy and meet the needs of disease prevention and treatment such as glaucoma).
