A planar supercapacitor is an electronic device whose structure includes two electrodes made of highly conductive materials, such as graphene, carbon nanotubes, conductive polymers, etc. Two electrodes are located on either side, separated by a thin, breathable insulating material. Such capacitors offer high energy density, rapid charge and discharge, and long life.

With the continuous advancement of science and technology, the design and manufacturing of planar supercapacitors have become more and more diversified, and product performance has also been significantly improved. For example, planar supercapacitors are developing towards high power density, high energy density, fast charge and discharge, long life and high reliability.

Planar supercapacitors are increasingly being used in various fields due to their unique performance characteristics, such as consumer electronics, smart wearables, medical equipment, new energy, etc. Among them, consumer electronics is the largest application field of planar supercapacitors and occupies a dominant position.
