A Planetary Stranding Machine is a specialized piece of equipment used in the manufacturing of cables, particularly for stranding or twisting multiple wires together to form a cable core. It is designed to handle high-precision twisting or stranding of conductors, such as copper, aluminum, or steel wires, into a circular configuration. The term 'planetary' refers to the motion of the wire reels (bobbin carriers) in the machine, which rotate around a central axis in a manner similar to the orbiting of planets around the sun. A Planetary Stranding Machine is essential in the cable manufacturing industry, providing the capability to produce strong, high-quality cables through a precise and controlled stranding process.
