Planned Preventative Maintenance (PPM) is a proactive maintenance approach that involves regular inspection, testing and repair of equipment, facilities and systems to prevent breakdowns and minimize the risk of equipment failure. The goal of PPM is to extend the service life of equipment and facilities, improve their performance and reliability, and reduce the risk of downtime and unscheduled repairs.

In PPM, maintenance activities are planned in advance based on the usage, age and condition of the equipment and the needs of the facility. This allows maintenance teams to schedule necessary maintenance activities during planned outages, thereby reducing the risk of unplanned outages and reducing the impact on operations.

PPM is often preferable to reactive maintenance, which involves waiting for something to break before repairing it. When dealing with equipment that has many safety or legal considerations, a preventive maintenance program can help businesses stay compliant. Therefore, PPM is especially important for assets such as elevators, fire alarms, smoke detectors, security systems, etc.

Planned Preventative Maintenance (PPM) Softwares can help businesses perform regular maintenance and upkeep on assets or equipment to increase uptime. This reduces the need for reactive or emergency maintenance. Time-based service plans that occur on a regular basis (e.g. monthly, six months, yearly, etc.) reduce the likelihood of system or asset failure. This also reduces the associated burden, losses and costs for businesses.

The global Planned Preventative Maintenance (PPM) Softwares market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
