Abstracts

The global Plano-Convex Laser Lenses market size is predicted to grow from US$ 712 million in 2025 to US$ 1130 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

In 2024, global Plano-Convex Laser Lenses reached an annual output of around 15 million units with a production capacity of about 18 million, the average unit price is about USD 45, and achieving an average gross margin of 40%. Plano-Convex Laser Lenses are precision optical components featuring one flat (plano) surface and one outwardly curved (convex) surface, designed to focus collimated laser beams into a converging point or to convert point sources into collimated beams. They are typically made from high-purity optical materials such as fused silica, BK7 glass, or calcium fluoride (CaF?), chosen for their low absorption and high transmission at specific laser wavelengths (e.g., 355 nm, 532 nm, 1064 nm). The manufacturing supply chain involves raw material preparation (melting and refining optical glass or crystal ingots), blank cutting and grinding, precision polishing of the curved and flat surfaces, application of anti-reflective or wavelength-specific coatings, and final inspection for surface accuracy and laser damage threshold. Major suppliers include specialized optical glass producers, precision lens fabricators, and laser system integrators that incorporate these lenses into laser cutting, medical, metrology, and scientific instruments.

United States market for Plano-Convex Laser Lenses is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
