## Abstracts

The global Plant-Based Organic Fertilizers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Plant-based organic fertilizers are derived from natural sources such as plants, vegetables, fruits, or animal by-products. These fertilizers contain organic matter rich in nutrients like nitrogen, phosphorus, and potassium, crucial for plant growth. They enhance soil structure, stimulate microbial activity, and improve nutrient uptake by plants, fostering healthier growth without relying on synthetic chemicals. Composting food waste, crop residues, or animal manure forms the basis of these fertilizers, offering a sustainable and environmentally friendly alternative to conventional chemical fertilizers.

The industry trend for plant-based organic fertilizers is driven by a growing demand for sustainable agriculture and environmentally friendly farming practices. There's an increasing emphasis on research and development to innovate and diversify plant-based fertilizer formulations, optimizing nutrient content and release patterns. Moreover, the trend includes technological advancements in production methods to scale up manufacturing and ensure cost-effectiveness. With a shift towards organic and regenerative farming, plant-based organic fertilizers are gaining traction as a viable solution to improve soil health, reduce chemical dependency, and promote sustainable crop cultivation.
