Plant-based semi-permanent hair dye is a hair dye product that uses plant extracts as dye ingredients to provide temporary or semi-permanent hair dyeing effects. Compared with traditional chemical hair dyes, plant-based semi-permanent hair dyes contain natural ingredients, such as indigo, rosewood, walnut shells, chamomile, tea, coffee, etc., which can give hair different colors. Plant-based semi-permanent hair dyes are generally less irritating to the hair and scalp and less damaging to the hair, so they are considered gentler hair dye options. The hair dye effect generally lasts for several weeks, and the color gradually fades as the number of hair washes increases.

The global Plant-based Semi-Permanent Hair Color market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
