Plant support clips are small, often reusable devices made from materials like plastic or metal that are used in gardening and horticulture to secure and support plants. These clips are designed to hold plant stems, branches, or vines in place, preventing them from bending, breaking, or sprawling. Plant support clips are commonly used for vertical gardening, training plants to grow in specific directions, and ensuring proper spacing in gardens or nurseries.

The market for plant support clips has grown in response to the increasing interest in gardening, especially among urban and small-space gardeners. Plant support clips provide an efficient and convenient way to manage and support plants, whether they are grown in gardens, greenhouses, or indoor spaces.
