Abstracts

The global Planting Concrete market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Planting concrete (PC), also called vegetation concrete or ecological concrete, is an eco-friendly material that allows plants to grow directly on it, and the roots of certain plants can survive in their limited voids. In general, PC is composed of coarse aggregates, Portland cement, water, and admixtures.

Planting concrete uses the air and water permeability of porous voids to penetrate the nutrients needed by plants, grow plant roots, plant grass, shrubs and other plants, and is used for greening river berms and beautifying the environment.
