Plasma arc detector is a device used to monitor arcs in RF plasma systems. It is mainly used in the semiconductor industry and other industries that require plasma-assisted processes. Arcs generated during plasma processing can cause damage to the target and chamber, resulting in substrate damage and particle generation. The arc detector can quickly detect arcs, and can be combined with supporting software to monitor and analyze plasma micro-arc events in real time to avoid major losses, such as scrapping of the entire batch of wafers.

The global Plasma Arc Detector market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
