Plasma gasification waste recycling is a waste treatment technology that uses high-temperature plasma torches to convert solid waste into a synthetic gas (syngas) and a solid residue called slag. The process involves subjecting the waste materials to extremely high temperatures (up to 10,000 degrees Fahrenheit) in a plasma gasifier. The intense heat breaks down the waste into its constituent elements, which are then reformed into syngas. The syngas can be used as a fuel for electricity generation or as a raw material for chemical production.
