The global Plasma-Wet Abatement System market size is predicted to grow from US\$ 276 million in 2025 to US\$ 494 million in 2031; it is expected to grow at a CAGR of 10.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The plasma-wet abatement system is an advanced technological solution that utilizes thermal plasma generated by electric arc discharge to decompose and purify harmful gases such as PFCs (perfluorinated compounds). Compared to traditional combustion-wash systems, this system exhibits higher energy efficiency and reduced environmental impact. It operates stably, effectively treating a wide range of pollutants, including those that are difficult to degrade, achieving purification efficiency of over 98% and meeting stringent environmental protection standards. The plasma-wet abatement system integrates the high-energy characteristics of plasma decomposition with the physical absorption of wet scrubbing, providing an efficient, stable, and environmentally friendly solution for industrial exhaust gas treatment.
