## Abstracts

The global Plasmid Purification Service market size is predicted to grow from US\$ 275 million in 2025 to US\$ 454 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

A plasmid purification service is a specialized laboratory service that isolates and purifies plasmid DNA from bacterial cultures. This service is commonly used in molecular biology and genetic engineering research, where plasmids serve as vectors to clone, transfer, or express genes of interest. Plasmid purification is essential for downstream applications such as sequencing, cloning, transfection, and various types of analysis.

The industry trend for plasmid purification service is reflected in the rapid adoption of automation, high-throughput systems, and advanced technologies such as next-generation chromatography techniques, including high-capacity, fast-flow matrices, designed to improve scalability and reproducibility. This trend is primarily driven by the surge in cell and gene therapies, where plasmid DNA serves as a crucial viral vector precursor. Simultaneously, capacity deployment is shifting from a cost-centric approach to a dual focus on 'safety + efficiency,' with companies increasingly strengthening their control over core materials and advanced production capabilities. The explosive growth in downstream application demand presents numerous opportunities: the global plasmid DNA contract manufacturing market is projected to continue growing, driven by gene therapy development, the chronic disease epidemic, and increased investment in biopharmaceutical R&D. Collaboration between service providers and technology suppliers to jointly develop optimized purification solutions will further unlock commercial potential. However, the industry faces significant challenges: stringent regulatory guidelines for GMP-compliant high-purity plasmid production, the high cost of

advanced instruments and specialized materials, disruptive global trade frictions and key technology bottlenecks, and intense, homogeneous competition that puts pressure on profit margins.
