Plaster Board Liner, also known as gypsum board liner or drywall liner, is a type of paper material that serves as the facing layer on either side of standard gypsum wallboard panels. This lining paper plays a critical role in the construction and functionality of plasterboards. The Plaster Board Liner typically consists of high-quality paper, which is usually made from recycled materials, and it is attached to the gypsum core with a water-resistant adhesive. The primary function of this liner is to provide a smooth surface for finishing operations like painting, wallpapering, or texturing. It also helps to strengthen the overall structure of the gypsum board, improving its handling characteristics during installation and enhancing its dimensional stability. In addition to providing an aesthetic finish, the liner acts as a vapor retardant, preventing moisture from easily passing through the board, thus maintaining its integrity over time. Different types of liners may be used depending on the specific requirements of the application, such as fire-rated, moisture-resistant, or soundproofing gypsum boards.

The global Plaster Board Liner market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
