Plasterboard is the generic name for a family of panel products that consist of a noncombustible core, composed primarily of gypsum, and a paper surfacing on the face, back and long edges. Plasterboard is one of several building materials covered by the umbrella term “gypsum panel products.” All gypsum panel products contain gypsum cores; however, they can be faced with a variety of different materials, including paper and fiberglass mats.

In 2017, the Asia-Pacific region accounted for the largest share and is projected to grow at the fastest rate in the plasterboard market from 2018 to 2023. Markets in developing countries such as China, India, Brazil, South Africa, and countries in the Middle East are projected to grow at a higher rate from 2018 to 2023, owing to the high population in these countries, along with expected new building constructions and renovation activities in the next ten years.
