The global Plastering Robot market size is predicted to grow from US\$ 209 million in 2025 to US\$ 326 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The plastering robot is an intelligent device used for automated plastering of building walls. It can replace traditional manual plastering, improve construction efficiency, reduce labor costs, and ensure the uniformity and quality of the plastering layer. It is a mechanical device controlled by programming and used to realize the automation of wall plastering. Its core components include motion system, sensor, control system and plastering head.

Traditional plastering work is intensive and has a poor environment. Young people are reluctant to work in the industry, leading to a labor shortage. Wages for skilled plasterers continue to rise, and robots can reduce long-term labor costs. Especially in developed countries, the aging of the workforce further drives the demand for automation.

Robot technology is mature. Improvements in technologies such as robotic arms, motion control, and sensors (such as lidar and visual recognition) enable robots to adapt to complex wall operations. Machine learning helps robots identify wall unevenness and automatically adjust plastering thickness and strength. Develop supporting mortar materials (such as quick-drying and high-viscosity) to meet robot construction requirements.

Robots can work 24 hours a day, 3-5 times faster than manual labor, shortening construction time. Avoid manual errors and ensure that the flatness and verticality of the wall meet the standards (such as the error is controlled within $\pm 1\text{mm}$). Precision construction reduces material waste and repair costs. In scenes such as high altitude and confined spaces, robots can reduce the risk of workers falling and inhaling dust.
