The global Plastic Additive market size is predicted to grow from US\$ 8304 million in 2025 to US\$ 11590 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Plastics additives are all chemicals which are used to polymerize, process or to modify end use properties of plastics.

Rapidly increasing usage of plastics in industrial manufacturing, construction, automotive and mechanical engineering coupled with increasing cost of natural metal are the major factors driving the growth of plastic additives market. Increasing costs of natural metals has increased preferences for plastic additives. Moreover, augmented household applications and lower cost of plastic products are likely to boost the growth of this market over the forecast period. On the other hand, the global plastic additives market is restrained by stringent government regulation on limited usage of plastic and environmental policies.
