A plastic antistatic agent is a substance used to reduce or eliminate static electricity buildup on plastic surfaces. Static electricity can be a common issue with plastic materials, as they tend to accumulate electrical charges when they come into contact with other surfaces or materials.

Plastic antistatic agents work by altering the surface properties of the plastic, making it less prone to static electricity buildup. These agents typically have a low surface resistivity, which allows them to conduct electricity and dissipate any static charges that may accumulate on the plastic surface.
