The global Plastic-Free Eco-Friendly Baby Wipes market size is predicted to grow from US\$ 717 million in 2025 to US\$ 1213 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Plastic-Free Eco-Friendly Baby Wipes refer to disposable baby-care wipes and dry cotton-soft wipes designed for infant and toddler skin cleaning, diaper changing, hand and mouth wiping, face cleaning, bathing assistance and daily hygiene care. The defining feature is that the wipe substrate does not contain conventional plastic fibers such as polyester, polypropylene or polyethylene. Instead, the product is mainly made from non-plastic fiber substrates such as wood pulp, regenerated cellulose fibers, cotton fibers, bamboo-derived cellulose or other plant-origin fibers. This product includes both pre-moistened baby wipes and dry baby wipes that can be used directly or moistened with water.

In 2025, global Plastic-Free Eco-Friendly Baby Wipes production reached approximately 33099 million Pcs, with an average global market price of around US\$ 22 per K Pcs.

The upstream raw materials of Plastic-Free Eco-Friendly Baby Wipes mainly include wood pulp, dissolving pulp, viscose fiber, rayon, lyocell fiber, bamboo-derived cellulose fiber, cotton fiber, cotton linter, spunlace nonwoven roll goods, wetlaid nonwoven substrates, airlaid substrates, purified water, mild surfactants, humectants, skin-conditioning ingredients, pH adjusters, baby-care-grade preservatives, embossing materials, converting materials, sealing labels, paper packaging and flexible packaging materials. The representative suppliers include Lenzing, Sateri, Birla Cellulose, Kelheim Fibres, Tangshan Sanyou, etc.

Plastic-Free Eco-Friendly Baby Wipes are mainly used in Household Use, Travel and Outdoor Use, and Other applications. Household Use is the core daily consumption scenario, covering diaper changing, baby skin cleaning and routine family baby care. Major downstream customers include infant families, hospitals, maternity care institutions and childcare service providers.

The gross margin of Plastic-Free Eco-Friendly Baby Wipes varies by product format, substrate type, formulation, thickness, certification requirement, brand positioning, manufacturing model and sales channel. The typical gross margin is generally around 20%-55%.

Plastic-Free Eco-Friendly Baby Wipes are disposable baby-care wipes and dry cotton-soft wipes designed for infant and toddler skin cleaning, diaper-changing assistance, hand and mouth wiping, face cleaning and daily hygiene care. The category includes both pre-moistened baby wipes containing purified water or mild cleansing lotion and dry baby wipes that can be used directly or moistened with water before use. The defining feature is that the wipe substrate does not contain conventional plastic fibers such as polyester, polypropylene or polyethylene; instead, it is made from wood pulp, regenerated cellulose fibers, natural cotton fibers or other non-plastic fiber materials. Plastic-Free Eco-Friendly Baby Wipes do not automatically mean flushable, compostable or plastic-free in packaging, unless the product carries separate certification or labeling. Their market value is mainly driven by reduced plastic-fiber use, improved baby-care safety perception, sustainability positioning and multi-scenario usability.

By product type, Plastic-Free Eco-Friendly Baby Wipes can be segmented into Wood Pulp-Based, Regenerated Cellulose Fiber-Based, Cotton-Based and Other. Wood Pulp-Based products mainly use pulp or pulp-blended substrates, offering good absorbency, cost efficiency and scalable supply, which makes them suitable for mass-market household packs, retailer private-label programs and high-frequency daily-use consumption. Regenerated Cellulose Fiber-Based products are typically made from viscose, lyocell, bamboo-derived cellulose or similar materials, providing a balanced combination of softness, absorbency, wet strength and environmental positioning, and are suitable for mid-to-premium baby-care brands, sensitive-skin products and sustainability-focused channels. Cotton-Based products use natural cotton or cotton spunlace nonwovens as their core selling point, offering stronger skin-friendly perception and premium positioning, and are commonly used for newborns, babies with sensitive skin, premium maternal-and-baby care and professional care scenarios. Other

products include mixed plant-fiber substrates, bio-based fiber blends, special embossed structures, differentiated thickness specifications, customized lotion formulations and channel-specific products designed to meet different requirements for price, texture, absorbency, tensile strength, pack size and brand positioning.

By application, Plastic-Free Eco-Friendly Baby Wipes can be segmented into Household Use, Travel and Outdoor Use and Other, with Household Use being the dominant application market. Household Use covers high-frequency scenarios such as diaper changing, newborn cleaning, face wiping, hand wiping, drool cleaning, post-feeding cleanup, bathing assistance and daily baby care. These use cases generate frequent consumption and stable repeat purchase, forming the core demand base of the market. Travel and Outdoor Use covers diaper bags, car travel, daycare, restaurants, flights, hotels, camping and emergency cleaning, where portable packs, travel-size packs, individually packed wipes and resealable packaging are especially important. Other applications include maternity hospitals, postpartum care centers, nurseries, pediatric care, mother-and-baby gift packs, e-commerce trial packs, institutional hygiene kits and retailer private-label programs. Although these scenarios are generally smaller than household consumption, they require higher standards in cleanliness, material safety, skin compatibility and brand credibility, supporting the professionalization and premiumization of the category.

Market growth is driven by the upgrading of infant-care safety standards, the substitution of plastic-based materials and broader premiumization in maternal-and-baby consumption. Infant skin has a weaker protective barrier, and household consumers are paying increasing attention to soft, skin-friendly, low-irritation, low-additive and fragrance-free care products, creating a strong basis for Plastic-Free Eco-Friendly Baby Wipes to replace ordinary tissues, small towels and some conventional synthetic-fiber wipes. Sustainability trends, plastic-reduction awareness and broader adoption of renewable materials are increasing market acceptance of wood pulp-based, regenerated cellulose fiber-based and cotton-based products. Young parents, newborn families and mid-to-high-income maternal-and-baby consumers are more willing to pay a premium for material transparency, plastic-free claims, natural fibers, trusted safety positioning and environmental responsibility. E-commerce platforms, mother-and-baby retail chains, content marketing and social media recommendations are improving consumer education and helping household packs, portable packs, multipacks and gift sets cover more usage occasions. Hospitals, maternity centers, daycare institutions and professional baby-care channels also generate demand for clean, safe and mild hygiene consumables, pushing Plastic-Free Eco-Friendly Baby Wipes from general daily consumer goods toward professional care products. At the same time, the growth

of retailer private labels and OEM/ODM manufacturing models makes it easier for this product category to scale across supermarkets, e-commerce, pharmacies and maternal-and-baby retail channels.

Market restraints remain significant. Plastic-free substrates usually rely on wood pulp, viscose, lyocell, cotton fibers or similar raw materials, which generally cost more than ordinary tissue or conventional fossil-based nonwovens, creating pressure on retail pricing, channel margins and consumer affordability. Wet wipes must maintain liquid stability, microbial control, skin mildness and shelf life, while dry wipes must deliver softness, absorbency, wet strength and linting control; both formats therefore require strong process control and quality management. Competition among brand owners, OEM/ODM manufacturers, online brands and retailer private labels is intense, which can lead to product homogenization, price competition and excessive sustainability claims. Raw-material price volatility, pulp and cotton supply fluctuations, exchange rates, freight costs, packaging costs and regulatory differences across regions regarding baby products, plastic-free claims and chemical residues also increase cost-control and compliance pressure for manufacturers.

LP Information, Inc. (LPI) ' newest research report, the "Plastic-Free Eco-Friendly Baby Wipes Industry Forecast" looks at past sales and reviews total world Plastic-Free Eco-Friendly Baby Wipes sales in 2025, providing a comprehensive analysis by region and market sector of projected Plastic-Free Eco-Friendly Baby Wipes sales for 2026 through 2032. With Plastic-Free Eco-Friendly Baby Wipes sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Plastic-Free Eco-Friendly Baby Wipes industry.

This Insight Report provides a comprehensive analysis of the global Plastic-Free Eco-Friendly Baby Wipes landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Plastic-Free Eco-Friendly Baby Wipes portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Plastic-Free Eco-Friendly Baby Wipes market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Plastic-Free Eco-Friendly Baby Wipes and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-

up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Plastic-Free Eco-Friendly Baby Wipes.

This report presents a comprehensive overview, market shares, and growth opportunities of Plastic-Free Eco-Friendly Baby Wipes market by product type, application, key manufacturers and key regions and countries.
