Plastic-free release paper is a base paper with special calendering treatment. The surface of this paper has been specially treated to form a high-brightness and high-smooth surface. Because its surface is dense, flat and bright, silicone oil can be directly coated on its surface without causing silicone oil penetration. Plastic-free release paper not only maintains the original heat resistance of paper, but also improves water resistance, and is not easy to cause dimensional changes after being damp.

The global Plastic-free Release Backing Paper market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
