The global Plastic Gravure Printing Machine market size is predicted to grow from US$ 359 million in 2025 to US$ 437 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

Plastic gravure printing machine is a printing equipment that uses gravure printing method and is specifically used for printing plastic materials such as plastic film and plastic sheet. The printing principle of gravure printing is mainly based on the characteristic of concave graphic parts on gravure printing plates. During printing, ink is filled into the depressions of the graphic and textual parts of the printing plate, while the non graphic parts of the plate are kept clean. Then, the excess ink on the surface of the printing plate is scraped off with a scraper, leaving only the ink in the concave part. When the printing plate comes into contact with the substrate (such as plastic film), the ink on the graphic and textual parts of the gravure printing plate is transferred to the substrate through a certain pressure, thus completing the printing process.

United States market for Plastic Gravure Printing Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
