The global Plastic Laser Welding System market size is predicted to grow from US\$ 407 million in 2025 to US\$ 600 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Non-contact laser welding offers several advantages when it comes to joining one plastic part to another. It works on the principle of partial transmission which lets a laser's light travel through one of the plastic parts to create heat and fuse or weld it to a second plastic part. The finished weld is contained between the parts. There is also no contact between the fused area and the heat source or atmosphere, so the finished joint is clean. Conventional plastic welding techniques such as ultrasonic and hot stamping, on the other hand, require contact with the outer surfaces of the parts being joined, and this can contaminate the joint and the parts' surfaces or mechanically damage the assembly.

Global key players of Laser Plastic Welding System include Han's Laser, Trumpf, LPKF Laser & Electronics, United Winners Laser, Emerson Electric, etc. The top five players hold a share about 45%. Asia-Pacific is the largest market, and has a share about 39%, followed by Europe and North America with share 30% and 21%, separately. In terms of product type, Fiber Laser Welding System is the largest segment, occupied for a share of 40%. In terms of application, Automotive has a share about 47%.
