The global Plastic and Rubber Liquid Cooling Hose for Automotive market size is predicted to grow from US\$ 2926 million in 2025 to US\$ 5616 million in 2032; it is expected to grow at a CAGR of 9.9% from 2026 to 2032.

Plastic and rubber liquid cooling hose can be used in the cooling system of traditional fuel automobile engines, connecting the engine, radiator, heater and other major components. By transmitting coolant, the heat generated by the engine is transferred to the radiator for cooling, to the heater for heating the cockpit, and the coolant after heat dissipation is transferred back to the engine for the next heat cycle.

With the promotion of national policies, the enhancement of people's environmental awareness and the advancement of technology, the popularity of new energy vehicles is gradually deepening. In the technology of new energy vehicles, the cooling technology and cooling system are particularly critical. The cooling system can be divided into air cooling, liquid cooling and phase change materials according to the cooling medium. Liquid cooling is the main cooling method for new energy vehicles at present, including water cooling and oil cooling. As an important component of new energy vehicles, the coolant pipeline needs to meet multiple requirements such as hydrolysis resistance, oil resistance, high temperature resistance and lightweight. At present, the pipeline materials used in automobiles can be divided into three categories, namely metal, rubber and nylon plastic. Nylon tubes have gradually become the main material used for cooling and lubrication pipelines due to their light weight and simple processing technology.
