## Abstracts

The plastic detonating tube is referred to as the detonating tube. Its structure is composed of a detonating charge and a plastic tube. It is a cable-shaped detonating device with a thin layer of explosive mixture attached to the inner wall of the plastic tube. Its function is to transmit low-speed detonation waves and output shock waves (flame) Impulse energy, in engineering blasting, is used to detonate the nonel detonator, and then detonate the explosive charge (industrial explosive). It is divided into two categories: ordinary nonel and high-strength nonel, with anti-stray electricity and anti-static, and the detonation speed is not less than 1600 m/s; after both ends are sealed, it can be immersed in water at a depth of 20 meters for 8 hours continuously. Product performance unchanged and so on.
