Plastic spray coating is a surface finishing process in which a liquid coating material is sprayed onto plastic parts to enhance their appearance, durability, and functional properties. Commonly used in industries such as automotive, consumer electronics, appliances, and packaging, this technique allows manufacturers to achieve various surface effects including gloss, matte, metallic, soft-touch, and textured finishes.

The coatings can serve different purposes, such as UV resistance, scratch protection, chemical resistance, or anti-fingerprint performance. Materials typically used include polyurethane, acrylic, epoxy, or silicone-based coatings, applied via manual or robotic spray systems. Spray coating improves both aesthetic quality and performance, adding value to plastic components while maintaining cost-effectiveness for large-scale production.
