Plastic tubing bundles are assemblies of multiple plastic tubes grouped and enclosed together in a parallel or organized arrangement, often with an outer sheath or binding wrap. These bundles are designed to simplify installation, protect the tubing, and provide organized routing of multiple fluid or gas lines in applications such as instrumentation, automation systems, laboratory setups, medical equipment, and industrial fluid handling. The tubes within the bundle are typically made of materials such as polyethylene (PE), polyurethane (PU), polyvinyl chloride (PVC), or PTFE, each selected based on the chemical compatibility, flexibility, and temperature resistance required. Plastic tubing bundles offer benefits such as reduced installation labor, improved system aesthetics, enhanced abrasion and chemical resistance, and easier maintenance by keeping lines together in a structured format.

United States market for Plastic Tubing Bundles is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
