The global Plastic Vacuum Thermoforming Machine market size is predicted to grow from US\$ 783 million in 2025 to US\$ 1265 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

In 2025, global production of plastic vacuum forming machines reached approximately 426,000 units. A Plastic Vacuum Forming Machine is a type of thermoplastic processing equipment used in thermoforming applications. It works by heating thermoplastic sheets until they become soft and pliable, and then using a vacuum suction process to draw the material tightly against a mold surface, forming products with specific shapes.

The machine typically consists of a heating system, forming platform, vacuum system, and control system, enabling continuous or semi-automatic production. Plastic vacuum forming machines are widely used in food packaging, medical trays, electronic product housings, automotive interior components, and industrial packaging products. They are characterized by high forming efficiency, low mold cost, and strong adaptability, making them an important piece of equipment in the plastics processing industry.

Plastic vacuum forming machines, as key equipment in thermoforming processes, are widely used across various fields such as food packaging, medical trays, electronic product housings, and automotive interior components. As global manufacturing continues to move toward lightweight design, cost reduction, and sustainable development, the trend of replacing traditional injection molding and metal processing with thermoplastic materials is becoming increasingly evident, thereby driving the expanding application of vacuum forming technology in packaging and industrial products. At the same time, rising demand from downstream industries for product customization, diversification, and rapid delivery has further accelerated the upgrade of

equipment toward automation, intelligence, and high-precision control. Overall, market competition in this industry is mainly centered on equipment performance optimization, production efficiency improvement, and the integration capability with intelligent production lines.
