Abstracts

The global Plastomers market size is predicted to grow from US$ 5840 million in 2025 to US$ 8070 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Plastomers or polyolefin plastomers (POP) are a class of high-performance polymers. The uniqueness of this plastic lies in their toughness, clarity, and excellent sealability, which is a result of their molecular build up. They are low-density with narrow composition distribution and narrow molecular weight distribution.

The U.S. and Europe are the largest markets of packaged food. Growth in the packaged food industry depends on growth of population. The slow growth in population along with rise in importance of organic food products is affecting the market growth. Films manufactured for food packaging applications account for a major consumption of plastomers. Therefore, decrease in demand from the packaging industry of the U.S. and Europe restricts the growth of the global plastomer market.
