Plate Chain Conveyor is a conveyor that uses a series of slats fixed on the traction chain to convey materials in a horizontal or inclined direction. A single steel plate is hinged into a ring belt as the traction and bearing member of the conveyor. The bearing surface has a transverse spacer placed on it. The driving ring belt in the tank box transports the coal scraping out through the spacer. It is composed of driving mechanism, tensioning device, traction chain, slats, driving and redirecting sprocket, frame and other parts. It has been widely used in metallurgy, coal, chemical industry, electric power, machinery manufacturing and other industrial sectors of the national economy.
