Plate Evaporator is a type of evaporator in which a thin film of liquid is passed and flows between the plates for the process of evaporation. The Plate Evaporators are also known as the gasketed plate and frame evaporators. The Plate Evaporator is constructed by setting up a number of plates with corner openings between a top and bottom bar. Plate Evaporators consist of a plate and frame heat exchanger and are mainly used in the food and beverage industry. The major advantages of Plate Evaporators are they are well adapted to materials, low headroom required, easily cleaned and modified. The major disadvantage of Plate Evaporators is the large gasketed area. Leakage can also occur if the gasket is not selected properly.
