Plate Heat Exchanger also known as heat-exchangers of the plate type, plate heat exchanger, plate type heat exchanger. Plate heat exchangers consist of thin plates joined together, with a small amount of space between each plate, typically maintained by a small rubber gasket. The surface area is large, and the corners of each rectangular plate feature an opening through which fluid can flow between plates, extracting heat from the plates as it flows. The fluid channels themselves alternate hot and cold fluids, meaning that heat exchangers can effectively cool as well as heat fluid.

The fluctuation of upstream raw material prices has a significant impact on product prices.
