The global Platelet Alumina market size is predicted to grow from US$ 126 million in 2025 to US$ 203 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

Platelet alumina is a type of aluminum oxide powder with a unique flat, hexagonal, plate-like crystal structure that is made by a special high-temperature calcination process. This tabular shape gives it specific properties, like a "gliding lapping effect" that provides superior polishing and a reduced risk of scratches on the surface of the material being worked on, making it ideal for applications like polishing semiconductor chips or electronic components. It's also used as a filler in cosmetics and other advanced materials due to its high hardness and other beneficial properties.

In 2024, global production of Platelet Alumina reached 160 k tons, with an average selling price of US$7.62/kg. A typical single-line production capacity is approximately 1,000-3,000 tons per year, and the industry's gross profit margin is approximately 20%-30%. Direct materials account for about 55%, manufacturing costs about 35%, and labor costs about 10%. The industry chain includes upstream bauxite/alumina, chemical reagents, and energy (electricity), and downstream products such as pearlescent pigments, precision polishing materials, functional coatings, high-performance ceramics, composite materials, and cosmetics.

United States market for Platelet Alumina is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Platelet Alumina is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
