According to this study, the global Platelet Rich Plasma market size will reach US\$ 349 million by 2031.

Platelet Rich Plasma is a biologic isolated from whole blood that is preferentially enriched for platelets. While platelets are the primary component of PRP, preparations may also contain other cellular components such as white blood cells (WBCs) and peripheral stem cells. These components all play a biological role in the healing process and are provided at concentrated levels in PRP. Thus, PRP may help optimize the conditions for healing of bone and soft tissue.
