A Platform Door Power Supply System (PSD/APD Power System) is a specialized, high-reliability power supply solution designed exclusively for platform screen doors (PSD) or automatic platform gates (APG) used in metro, light rail, high-speed rail and transit systems. It provides safe, continuous, redundant power for the door drive units, control units, detection devices, indicators and communication circuits of platform doors, to ensure the doors operate stably without interruption even in the event of mains failure. The Platform Door Power Supply System is a highly reliable, rail-specific power solution. A standard system, including drive power, control power, redundant UPS and monitoring, typically costs several thousand to around ten thousand US dollars per set, depending on safety levels, redundancy design and project customization. The industrial chain covers upstream electronic components, midstream professional power supply manufacturers, and downstream platform door integrators and global metro and high-speed rail projects.
