Platinum spark plugs are a type of automotive spark plug that feature a center electrode made of platinum. They are commonly used in gasoline engines and provide several advantages over traditional copper or standard spark plugs.

The main defining feature of platinum spark plugs is the use of a platinum center electrode. This electrode is typically thinner than copper electrodes found in standard spark plugs, allowing for a more precise spark and improved ignitability. The platinum material withstands high temperatures and chemical corrosion, ensuring reliable ignition and consistent performance over an extended period.
