PLC modem ICs (Power Line Communication modem ICs) are electronic components used in Power Line Communication (PLC) systems, which allow data to be transmitted over power lines. These ICs are designed to modulate and demodulate data signals sent over power lines, enabling communication between devices connected to the power grid.

PLC modem ICs are typically used in applications where it is not feasible or cost-effective to install separate communication lines, such as in smart grid systems, home automation networks, and industrial control systems. They are also used in applications

such as street lighting systems, where power lines are already in place and can be used for data transmission.

PLC modem ICs typically support a range of communication protocols, including G3-PLC, PRIME, and HomePlug, and are available in a variety of form factors, including System-on-Chip (SoC) and stand-alone modem ICs. Some key features of PLC modem ICs include low power consumption, high data transfer rates, and robust performance in noisy electrical environments.
