A pleated HVAC filter is a type of air filter that is commonly used in heating, ventilation, and air conditioning (HVAC) systems. It consists of a series of pleats or folds in the filter material, which increases its surface area and improves its efficiency at capturing airborne particles and pollutants.

Pleated filters are typically made of synthetic materials such as polyester and they come in a variety of sizes and ratings to fit different HVAC systems. They can capture a wide range of contaminants, including dust, pollen, mold spores, pet dander, and even some bacteria and viruses.

Pleated HVAC filters are an important component of indoor air quality management, as they help to remove harmful particles from the air and prevent them from circulating through your home or building. Regularly changing your pleated filters is essential for maintaining the efficiency and effectiveness of your HVAC system, as well as promoting good air quality and reducing the risk of health problems related to poor indoor air quality.

Market Drivers:

Indoor Air Quality (IAQ) Regulations: Stringent regulations and standards governing indoor air quality in commercial buildings, set by organizations like ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) and local authorities, drive the demand for high-quality pleated filters.
