The global Pleuromutilin Antibiotic market size is predicted to grow from US\$ 92.42 million in 2025 to US\$ 130 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Pleuromutilin is a broad-spectrum diterpene antibiotic produced by *Pleurotus mutilus*. It is the precursor of semi-synthetic derivatives of pleuromutilin and can effectively inhibit most Gram-negative bacteria, positive bacteria and some Gram-negative bacteria.

Pleuromutilin's market is driven by its effectiveness against specific bacterial infections and its widespread use in the veterinary and poultry medicine sectors. Its successful application in veterinary medicine and increasing demand have propelled market growth. Additionally, concerns about antibiotic resistance have prompted the livestock industry to adopt more sustainable veterinary medicines, with Pleuromutilin being considered a relatively low-resistance option, further boosting market demand. However, the Pleuromutilin market also faces several challenges. One of these challenges is the continuous rise in antibiotic resistance, which may limit its long-term effectiveness. Furthermore, some regions and markets may have stricter regulations on antibiotic use, posing challenges to market access for Pleuromutilin. Additionally, the veterinary sector's interest in alternative treatment methods and greener veterinary medicines could impact the growth of the Pleuromutilin market. Therefore, the market needs to continually address challenges such as antibiotic resistance and regulatory restrictions to maintain sustainable growth.
